

PROJECT CHARTER

PROJECT TITLE: EG Service

Start Date: 04/12/2019 **End Date:** 30/03/2020

Project Sponsor: Sponsor

Customer: ITS G.Marconi Institute

Users: G.Marconi Students

Stakeholders and Expectations:

Team: Receive detailed and accurate feedback on software performance

ITIS G.Marconi: Having an interactive and dynamic web application perfect for the use of any user

Purpose (Problem or opportunity addressed by the project):

The main purpose is to make a functional and interrupting web application available to the user so that there are no problems with the purchase

Goals and Objectives:

The overall goal is to provide an effective way to buy overhead doors

- Provide the interface for the purchase of overhead doors
- Works in a simple and intuitive way.

Schedule Information (Major milestones and deliverables):

05/12/2019 - Explanation of the work to be carried out

08/12/2019 - Consultation of available material

12/15/2019 - Organization of the group

20/12/2019 - Project plan completed

05/01/2019 - Beginning of the documentation

01/31/2019 - Documentation completed

02/02/2019 - Creation of the database containing the companies

23/02/2019 - Graphical interface creation

03/01/2020 - Database completed

25/03/2020 - Union of the parts of the project

30/03/2020 - Delivery of the project

Approach:

Each group is assigned a selected part. A three-part division, one person for the client part, one for the database and two for the server part

Constraints:

Sponsor approval is required to make this app official. All symbols provided must comply with the guidelines provided.

Assumptions:

The sponsor's terminals are available and work when we need them. It will be possible to work in locations far from the company. You can interface the app with a third-party website.

Success Criteria:

The project will be a success based on customer feedback and the success of the site according to a customer evaluation and with a view on the door sales number.

Scope:

The dynamic and rapid use for each individual user so that it can be used by any user..

Risks and obstacles to success:

The difficult realization of the server due to lack of funds and possible devices in our shortcomings.
